

DID YOU KNOW?

To ensure the purity of dietary supplements and sports nutrition products, look for the NSF Certified for Sport™ Mark on the product label.

TRAINING DAY

every athlete. every sport.

GAME TIME is the first sports nutrition supplement designed to support athletes on game days and fuel their workouts between competitions. **GAME TIME** is formulated to increase energy, explosiveness, endurance, intensity, and lean muscle tissue. Drinking **GAME TIME** will power you through the 4th quarter, the 9th inning, the final leg of the race, and the last set in the weight room.

For more information about the NSF program or answers to specific product questions, please e-mail CertifiedForSport@nsf.org or call 800-NSF-Mark or 734-913-5706.

TESTING

Who is NSF International?

NSF International, an independent, not-for-profit organization, helps protect you by certifying products and writing standards for dietary supplements, food, water, air and consumer goods (www.nsf.org).

What is the NSF Athletic Banned Substances Program?

Also known as NSF Certified for Sport™, the program minimizes the risk that a dietary supplement or sports nutrition product contains banned substances when taken at the recommended serving size.*

NSF developed this program to meet the growing demand of athletes, coaches and all those concerned about banned substances in sports.

What is the purpose of the program?

The program certifies that participating manufacturers and their products have met NSF's stringent independent certification process guidelines, including:

- Product testing for banned substances and label content confirmation.
- Formulation and label review.
- Production facility and supplier inspections.
- Ongoing monitoring.

*NSF has tested and certified that these products contain the identity and quantity of dietary ingredients declared on the product label, and that these products do not contain known banned substances. NSF certification, however, is limited to the specific serving size on the label, and consumption in excess of that serving size is not part of the certification.

CERTIFICATION

Which banned substances does NSF evaluate specifically?

NSF certifies products and inspects facilities for a range of substances identified by leading sports organizations, such as the World Anti-Doping Agency (WADA), the National Football League (NFL), National Football League Players Association (NFLPA) Major League Baseball (MLB), Major League Baseball Players Association (MLBPA), Professional Golf Association (PGA), Ladies Professional Golf Association (LPGA) and Canadian Centre for Ethics in Sport (CCES). These include stimulants, narcotics, steroids, diuretics, beta-2-agonists, masking agents and other substances.

Why is third-party certification important?

Products certified by NSF conform to the highest consensus standards. From extensive product testing and formulation/label review to plant inspections, NSF is the only third-party testing organization to conduct a complete evaluation of every aspect of a product's production before it can earn certification. Ongoing monitoring ensures continued compliance to program requirements.

How will I know which products are NSF Certified?

NSF does not sell products. However, companies that successfully complete NSF's certification

PROTECTION

program can sell their products and market them as NSF Certified for Sport.™

For your protection:

- Look for the NSF Certified for Sport™ Mark on the product label to be sure the product has been certified to the highest quality standards.
- For the most up-to-date list of products that have received NSF Certification, check the NSF website at www.nsf.org.
- Press releases will notify players and strength coaches when a company has received NSF Certification.

What if I purchase a product that isn't certified by NSF International?

You are taking a risk because there is no way to know that what is in the product matches what is listed on the label. Even worse, the product could contain banned substances.

Your best protection: look for products with the NSF Certified for Sport™ Mark.
